

Integrated Management System QHSE Policy

Aqualine implement and maintain an Integrated Management System QHSE (IMS) to ensure that all activities across the project lifecycle including planning, design, procurement, construction, commissioning, handover, and maintenance are performed in a controlled, efficient, and responsible manner.

We are committed to

- delivering safe, reliable, and sustainable water and wastewater treatment projects that protects public health, the environment, employees, contractors, and surrounding communities.
- delivering projects that meet client requirements, contractual obligations, regulatory requirements, and applicable international standards, ensuring long-term performance and operational reliability of facilities.
- applying a risk-based approach to identify and control technical, environmental, health and safety, and operational risks associated with project execution and treatment processes.
- preventing pollution, protecting natural resources, and minimizing environmental impacts, including emissions, discharges, waste generation, and energy consumption.
- providing and maintaining safe and healthy working conditions, eliminate hazards where practicable, reduce risks, and promote active participation and consultation of workers.
- ensuring that employees, contractors, and suppliers are competent, aware, and aligned with IMS requirements and project objectives.
- complying with all legal, regulatory, and contractual requirements applicable to our activities and locations of operation.
- establishing measurable objectives and performance indicators, monitor results, conduct audits and reviews, and pursue continual improvement of our processes and systems.
